ODYSSEUS HONEYGOLD

Sporty elegance in unique material and colour combination

At Watches and Wonders 2025, A. Lange & Söhne presents the sporty-elegant ODYSSEUS in a 750 honey-gold (HONEYGOLD®) case, complemented with a brown dial and a honey-gold bracelet. The timepiece, limited to 100 watches, thus exhibits a particular brand of stylish elegance.

The ODYSSEUS HONEYGOLD

The ODYSSEUS was specially developed to meet the extremely high expectations that its wearers have of a precision mechanical watch – even during their sports and leisure activities. To this end, it is equipped with a robust self-winding movement and a case that withstands a test pressure of 12 bar.

With its prominent design and large displays for the date and the day of week, the ODYSSEUS sets benchmarks in the category of sporty-elegant timepieces. The slender case exudes an air of lightness while rounded and angular elements provide a dramatic contrast. The tapered pushers for correcting the date and the day of week are positioned above and below the screw-down crown, emphasising the watch's distinctive appearance. The narrow bezel allows for a comparatively large dial. The captivating interplay of brushed surfaces and chamfered edges is echoed on the lugs and links of the bracelet in 750 honey gold.

Comfortable honey-gold bracelet

For the first time, the manufacture presents the ODYSSEUS with a honey-gold, five-row bracelet. It is harmoniously integrated into the case and eminently comfortable to wear. The safety deployment buckle has a user-friendly mechanism that, by pressing a pusher, allows its length to be adjusted by up to 7 millimetres, without even having to open the buckle. If required, the bracelet can also be adapted by adding or removing individual links.

A stylish colour combination

The fourth colour and material version of the ODYSSEUS pairs a honey-gold case, measuring 40.5 millimetres in diameter and 11.1 millimetres in height, with a brown dial. The elegant hue matches the warm lustre of the manufacture's exclusive alloy – characterised by its typical colour and particular hardness. The hands and notched baton appliques are also made of honey gold. With a height of 2.4 millimetres, the white numerals of the outsize date and the letters of the day-of-week display stand out against the brown background. A luminous coating was applied to the lancet-shaped hands for hours and minutes as well as the hour markers, also assuring unambiguous time readings in the dark. The embossed groove structure between the hour markers and on the scale of the subsidiary seconds dial underscores the three-dimensional impact of the dial. It contrasts against the subtly gleaming inner surfaces of the main and subsidiary dials. The red number 60 provides a colourful accent on the peripheral minute scale that is printed on the bevelled, gold-coloured flange ring.

Sporty elegance in honey gold

Robust mechanics – with typical Lange finish

Specially developed for a wide range of uses, the manufacture calibre L155.1 DATOMATIC of the ODYSSEUS is in a league of its own regarding reliability and robust design. The name DATOMATIC, visible on the central rotor, stands for the date mechanism combined with

automatic winding. The unidirectionally winding rotor assures efficient winding and a constant delivery of energy.

Calibre L155.1 DATOMATIC

The intricate, aesthetically appealing details of the artisanally finished movement that is assembled twice can be observed through the sapphire-crystal caseback. They include the skeletonised and partially black-rhodiumed rotor with a centrifugal mass in 950 platinum, the plates and bridges made of untreated German silver, blued screws and the screwed gold chaton above the escape wheel. When fully wound, the mainspring barrel delivers a maximum power reserve of 50 hours. To guarantee high-rate accuracy regardless of external factors, the balance operates at a frequency of 28,800 semi-oscillations per hour (4 hertz). It is regulated with four recessed screws that are flush with the outside of the balance-wheel rim. This design reduces turbulence despite the higher frequency. Together with the freely oscillating balance spring made in-house, the minimised air resistance has a positive impact on the movement's rate accuracy and energy efficiency. Contrary to other Lange calibres, the oscillation system is held by a balance bridge secured at two points, instead of by a cock. It is manually engraved with a wave pattern alluding to the water resistance of the watch.

"With the ODYSSEUS, we laid the foundation for our latest watch family in 2019, thus unfolding a creative potential for us that we further tapped into by developing this new model in honey gold," explains Lange CEO Wilhelm Schmid. "In a special way, the warm lustre emanating from this exceptional colour combination reflects our ambition to never stand still."

About A. Lange & Söhne

Dresden watchmaker Ferdinand Adolph Lange laid the foundations for Saxony's precision watchmaking industry when he established his manufacture in 1845. His precious pocket watches remain highly coveted among collectors all over the world. The company was expropriated after World War II, and the name A. Lange & Söhne nearly vanished. In 1990, Ferdinand Adolph Lange's great-grandson, Walter Lange, had the courage to relaunch the brand. Today, Lange crafts only a few thousand wristwatches per year, predominantly in gold or platinum. They are equipped exclusively with movements made in-house that are elaborately finished and assembled by hand. With 75 manufacture calibres developed since 1990, A. Lange & Söhne has secured a top-tier position in the world of watchmaking. Its greatest achievements include the LANGE 1, the first regularly produced wristwatch with an outsize date, and the ZEITWERK, with its precisely jumping numerals. Extraordinary complications such as the ZEITWERK MINUTE REPEATER, the DATOGRAPH PERPETUAL TOURBILLON and the TRIPLE SPLIT represent what the manufacture always strives for: to drive the traditional art of watchmaking to ever-new heights. Launched in 2019, the sporty-elegant ODYSSEUS in stainless steel marked the beginning of a new chapter for the manufacture.

ODYSSEUS HONEYGOLD		Ref. 363.150
Movement	Lange manufacture calibre L155.1 DATOMATIC®, self-winding, crafted to the most exacting Lange quality standards, decorated and assembled by hand; precision-adjusted in five positions; unidirectional winding central rotor with 950 platinum centrifugal mass; balance bridge engraved by hand	
No. of movement parts	312	
No. of jewels	31	
No. of screwed gold chatons	1	
Escapement	Lever escapement	
Oscillation system	Shock-resistant balance with four poising screws; superior-quality balance spring manufactured in-house, frequency 28,800 semi-oscillations per hour (4 hertz), precision beat adjustment system with cam and whiplash spring	
Power reserve	50 hours when fully wound	
Functions	Time indicated in hours, minutes, and subsidiary seconds with stop seconds; date and day-of-week displays	
Operating elements	Screw-down crown for winding the watch and setting the time; two pushers for correcting the date and day of week	
Case dimensions	Diameter: 40.5 millimetres; height: 11.1 millimetres	
Movement dimensions	Diameter: 32.9 millimetres; height: 6.2 millimetres	
Case	750 HONEYGOLD®	
Water resistance	Up to 12 bar (120 metres)	
Dial	Brass, brown	
Hands and appliques	HONEYGOLD®; baton markers, hour and minute hands luminous	
Crystal and transparent caseback	Sapphire crystal (Mohs hardness 9)	
Bracelet	750 HONEYGOLD®	
Buckle	Safety deployant buckle with precision adjustment mechanism for adjusting the length	
Limited edition	100 watches, edition engraving
